PROJECTS

Labour Management System -Developed a web-based Labour Management System that connects workers and clients through role-based access, allowing worker registration, profile management, worker search based on skills and location, and review features to improve service quality and trust.

Technologies Used: PHP, MySQL, XAMPP, HTML, CSS, and JavaScript.

Student Book Shop Management System -Developed a web application where students can buy, sell, and upload old books with book details, price, condition, and contact information. Implemented book search, image upload, and direct Call/WhatsApp communication features for easy student-to-student book exchange.

Technologies Used: Python, Flask, MySQL, HTML, CSS, JavaScript

Smart IV-Set (NAIN Project Participation) – Presented the idea of a smart IV-set system designed to reduce IV infusion errors and improve healthcare workflow efficiency through automated monitoring and fluid level detection.

SKILLS

- Programming Languages: Python, JavaScript, C, C++, Java, PHP
- Web Technologies: React JS, Node JS, Express JS, HTML, CSS
